

Six for Six

Team Number: 101-6

Calista Nguyen, Evan Easton, Joe Falbo, Nico Barone, Michael Heine, Ben Wedeen

Tender

Our website will be a recipe website that is designed to help college students cook healthy balanced meals. It will allow students to pick from a variety of different meals that are healthy and easy to cook. The meal options will also provide nutritional values and add ingredients to a running shopping list.

We decided to create this application because college students tend to not eat the healthiest or eat well-balanced meals every day. Our application will help them know what to eat and provide the nutritional values of what they are eating. It will help students not only know what to eat but be more conscious of what they eat.

Vision Statement:

For college students who need to know what to eat. Tender is a recipe website that suggests healthy meal plans for students who struggle knowing what to eat every day and how to eat healthier.

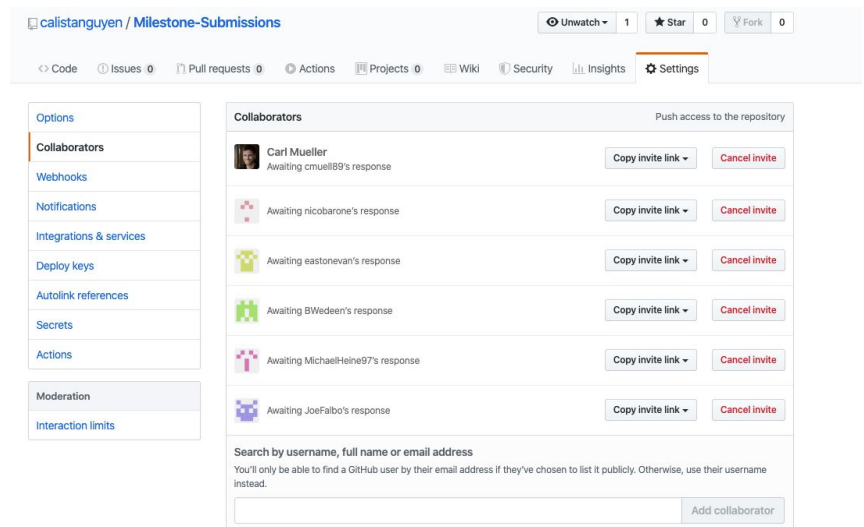

Version Control:

We created 3 GitHub repositories:

1. Team Meeting Logs
2. Milestone Submissions
3. All project code and components

Development Method:

- Agile
 - Prototyping
 - Continuous testing
 - Creating User Stories to understand what users want
 - Product & Sprint backlogs

Communication Plan:

We are using GroupMe to communicate with each other throughout the semester. We decided to go with GroupMe because it is more efficient since not all of us have the same kind of phone. This will be our primary form of communication outside of our weekly meetings.

Proposed Architecture Plan:

- Front end:
 - HTML / CSS
- Back end:
 - Linking are grocery database with a Grocery API

Meeting Plan:

Fridays from 12 p.m. to 2 p.m. in Case Building face-to-face
